Comprehensive Healthcare Information Management System

Transforming the Business of **HEALTHCARE** Enterprise

Healthcare organisations have to become patient centric. Today healthcare organisations confront enormous challenges: spiraling costs, staffing shortages, increasingly strict regulatory requirements, rising patient expectations, overload of information, and more...

The challenge: How does one provide quality patient centric care while fulfilling regulatory requirements and contending with rising costs and limited resources?

Technology infrastructure, service oriented approach, component based architecture and its integration with business processes are the keys to the success or failure of any information intensive, data-driven relationship. Information will restructure the way healthcare is delivered.

There is a need for an information solution that balances quality of care, service and costs in an integrated and open environment.

Patient centric approach will help healthcare organisations reflect the cost and the outcome of every action; clinical, financial, diagnostic and therapeutic.

Ranging from corporate hospitals to charity institutions and government hospitals, Dhii-CHiMS manages numerous inpatient beds across various geography.

Improve profitability, Increase efficiency and Ease of manageability

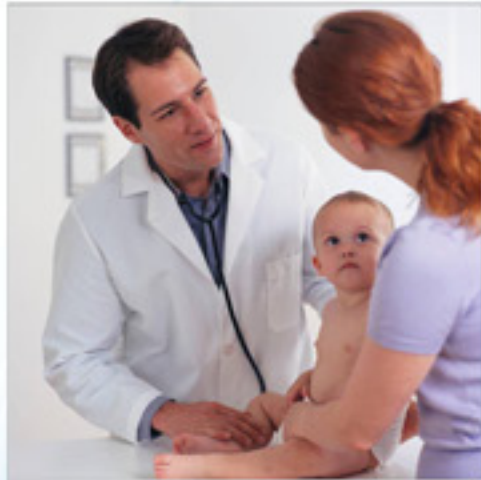

Your Partner in Progress.

Dhii realises that implementing a hospital information management system requires more than an advanced software. Implementation is a challenge. Aligning business process to the workflow, incorporating best practices, user training, flexibility are some of the many critical factors to be addressed for successful implementation.

Your future is secure with Dhii as your partner. As your needs change and healthcare advances, we focus on clinical / administrative /resource excellence. We will be with you every step of the way.

Dhii offers the following services:

- ▶ Business Process Re-engineering
- ▶ Work flow analysis
- ▶ Incorporation of best practices
- ▶ Project management
- ▶ User and system administrator training
- ▶ Onsite implementation support
- ▶ Imaging equipment interface development
- ▶ Diagnostic equipment interface development
- ▶ Monitoring device interface development
- ▶ Post-implementation technical support
- ▶ Post-implementation maintenance
- ▶ System audit
- ▶ Preventive maintenance

Component based **IT Solution Designed** to address the needs of Healthcare Ecosystem

Dhii-CHiMS is the next generation Healthcare information management system for today's healthcare needs. It is a high performance user - friendly online healthcare information management system based extensively on graphics and graphical user interface. It is modularly built and extremely flexible. Dhii- CHiMS being web based product can be configured around various databases in an n-tier Environment. Dhii-CHiMS has been created with active participation of domain experts.

We extend our capability beyond managing devices, integrating and managing various applications, data and business processes within and across organisational boundaries.

We position ourselves as '*Intelligent People Innovative Solutions*' in the healthcare sector helping you face today and to meet future challenges.

Dhii-CHiMS is a comprehensive solution designed to automate the activities in the Hospital. Designed with intuitive user interface, the system has the capability to administer the total enterprise and manage information exchange efficiently.

The system is designed modularly enabling users plan implementation in phases.

Dhii-CHiMS provides for single patient viewer for patient medical records and financial details and supports international standards in documentation for diseases, procedures, data exchanges, images and EDI.

With HL7 interface and an emphasis on addressing security and privacy concerns of patients and users effectively, **Dhii-CHiMS** has been designed for multi server support. **Dhii-CHiMS** gives users access to drug, medical and clinical databases while providing mailing, messaging and interface support.

Dhii-CHiMS – a comprehensive healthcare solution with Application, Implementation, training, service and support from a healthcare focused company.

 - ! Increased understanding of employee productivity and work scheduling
 - ! Better management of equipment and knowledge of service requirements
 - ! Reduce medical and technical errors

It's Time to Look Beyond the Process. Intelligent Solution is the key...

Dhii-CHiMS - A **Web based** product natively built on **wintel** platform optimized to support various OS / Database / Platforms **seamlessly**

Information must flow in real time with the patient and material and human resources. Knowledge must be available at the point of care.

Automating paper medical records / changing business rules / reducing functions and processes won't solve the challenges facing providers and institutions in today's healthcare environment. There is need for a healthcare information system that helps change the way patient care is provided, the way resources and expertise are managed and the way workflow is co-ordinated in the organisation.

Dhii-CHiMS

Has perspectives for different stakeholders like patients, physicians, providers, regulators and managers

Lowers transaction costs

Integrates and aggregates data from various locations, sources and systems

Secures patient information to ensure privacy and integrity

Complies with regulatory frameworks

Collaborates with various stakeholders in the healthcare environment

Dhii-CHiMS provides a toolkit, which enables to establish clinical pathways and manage outcomes.

A complete Health check-up for your Enterprise
